

Enjoy the fun of making your own pair of fish for April Fools' Day in only 10 simple steps!

List of Tools:

- scissors
- knife blade
- glue stick

Step 1: Print out all the sheets of this document on white A4 paper from your homeprinter.

Step 2: Cut out all the shapes along the pink dashed lines with a pair of scissors.

Step 3: Take the front facing fish shape & fold it in half along the center line. Once folded in half, grab your scissors (or knife blade) & cut along the grey dashed lines to create a 3D effect for your fish.

Step 4: Take the triangle shape that is the back of the fish & with the knife blade cut along the 3 grey dashed lines.

Step 5: Next, fold all the rest of the fish pieces along the pink continuous lines.

Step 6: Once all pieces are folded, take your glue & get ready to stick.

Step 7: Take the back shape of the fish. Through the two diagonal side slots, slip in the fish fins. Now apply glue on the pink areas of the base piece & secure the fins down. Repeat the same with the fish tail through the top slot.

Step 8: Apply some glue along the pink area on the bottom of the triangle & stick down the fish's tongue.

Step 9: Now the back of the fish is complete. With its 2 long diagonal sides folded down, apply glue along the outside part & stick the fish front piece on top. Your fish is almost complete!

Step 10: Take the two round eye pieces & stick them on the front of the fish's head, placing them on top on the pink areas.

Your fish is complete & ready to fool your friends & family! Make the fun last longer by building up the second blue fish.
